

Turtle Kiddy Bus

4 Seater - Features

Easy to push - and steer

Children and their gear make quite a load, so we have focused on the ergonomics of manoeuvring the Kiddy Bus around. The Kiddy Bus is made of plastic and aluminium, which keeps it extremely light and makes the vehicle very easy to push. The front wheels swivel, which makes it easy to manoeuvre and change direction. This also means there is no need to lift the Kiddy Bus to turn corners. The children get in and out via a door in the side, just like in a real bus. It's fun for children, and saves adults the strain of repeated heavy lifting.

Children can get in and out of the Kiddy Bus through the side doors - just like a real bus. Younger children really love this feature, and it means adults avoid the risk of back injuries associated with heavy lifting. The children sit in pairs opposite each other, making it easy to chat with their friends.

The foot rail makes it easy to negotiate obstacles such as kerbs and to cross rough surfaces. The Kiddy Bus is only 30" wide, so it easily fits through average doorways, checkouts and elevators.

The turtle Kiddy Bus brakes automatically if you lose your grip. For greater security on longer walks, sliding your wrist into the loop makes it possible to hold the brake handle firmly against the handle. The moment you let go the handle, the loop disengages automatically.
